25X1

25X1

25X1

15 August. At 8 a.m., three jet bombers took off from the field. One of them broke out a sleeve target after the take-off. At 5 p.m., 16 jet bombers were parked in two groups of 11 and 5 planes from east to west.

18 August. After 8 p.m., there was night flying. There was a light wind from the south, and the sky was slightly cloudy at an altitude of 600 meters. A take-off was made every 20 minutes. The planes had set position lights which were red at the left side and green at the right side. One jet bomber flew very high. It gave light signals at irregular intervals, the beam of light reaching down to the ground.

25X1

22 August. At 7 a.m., a type-30 plane took off 25X1 heading west. It was raining. At intervals of 1 minute, take-offs were made by a type-30 plane and a type-27 plane 25X1 The planes landed at 7:30 a.m. at inervals of about 800 meters. A type-27 plane took off at 25X1 7:15 a.m., flew over the field at 8:50 a.m. at an altitude of about 200 meters and dropped a sleeve target which apparently was not hit by 25X1 bullets. Subsequently, the plane landed at the field. Type-27 planes, took off at 8:51 a.m. at intervals They landed at 9:20 a.m. Flying continued throughof about 600 meters. 25X1 out the morning. Three planes were observed landing at noon. At 1 p.m., 16 aircraft were parked at the dispersal area. Maintenance on the landing goars of two planes was in pro-

25August. There was no air activity throughout the day. Between 3 and 5 p.m., all the jet bombers parked on the dispersal area were being refueled from three tank trucks each towing a trailer. At intervals, the tank trucks left the landing field, probably for refueling. After 5 p.m., when all the aircraft were refueled, the planes taxied under their own power from the dispersal area and were parked in groups of 5, 4, 1, 2 and 4 planes. There was an interval of about 15 meters between the individual groups. This activity probably was the preparation for night flying, which started at 8 p.m. with the take-off of a jet bomber. The first landings were made at 8:30 p.m.. Usually individual flights were observed during hight flying which lasted until 2 a.m.. It was once observed that two aircraft flew very high giving light signals with a searchlight at irregular intervals.

26 August. There was no air activity. Fifteen jet bombers without auxiliary fuel tanks were parked in groups of 5, 4, 2, and 4 planes from east to west on the dispersal areas. Another jet bomber was observed about 200 meters south of the taxiway. Aircraft maintenance work was in progress.

27 August. There was a slight wind from the southwest. It was raining; the visibility was limited to 1 km, and the sky was overcast at an altitude of about 150 meters. A type-27 jet bomber with the red No 116 took off at 7:15 a.m. and landed at 7:45 a.m.. Forty take-offs and lamings were made up to 11:45 a.m. The numbers on the planes could not be identified because of the poor visibility. Previously, the jet bombers approached the runway from the east and, from a far distance, flew in a straight line over the Krausnick radio installation. On this day, however, all the planes coming from a great distance approached from about 500 meters north of the usual direction of approach, banked sharply to the south about 500 meters from the east end of the runway, then banked sharply to the right in order to reach the direction of approach and, subsequently, landed at the field. During the air activity, a twinengine plane with double rudder assembly repeatedly took off and landed at the field.

	29 August. At 7 a.m., seven jet bombers took off at intervals of 600 meters.
25X1	The first and the last plane were type-30 s
25X1	while all the other alone were type-30 s
23/1	while all the other planes were type-27s. Immediately after the take-off, the planes assembled in line abreast formation. After flying a few kilometers
	one planes assembled in line aureast formation. After living a few kilometers
	streight shead, the formation turned to the south, circled once over the field and, subsequently, headed southwest. There was an interval of about three
. "	tipe appropriate the individual planer was an interval of about three
	wing spans between the individual planes. At 8:10 som., the planes landed individually at intervals of 500 to 600 meters. After the local flight, the
	formation gradually broke up, the left wing plane turning to the south, while
	the remaining formation flew straight ahead for a short distance. Subsequently,
	the other planes individually turned to the south and, at 8:40 a.m., landed
	individually with intervals of 500 to 600 meters. According to a senior
	lieutenant, this formation dropped bombs over the Kummersdorf artillory range.
	and the same of the same of the same and the same of the same
	30 and 31 August. No air activity was observed. (2)
	The state of the s
2514 40

Between 25 and 30 August. 16 jet bombers were parked at the dispersal area after the air activity had ceased. On 30 August, the planes changed their positions. They were parked in groups of 6, 5 and 5 planes from west to east. (2)

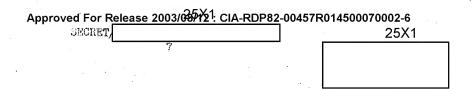

8.	2 chi mant sei the as
25X1	railroad station during the night of 16 to 17 August. On 18 August, 8 x 37-mm
20/(1	AA gung. 2 cmg-syle converse of 10 to 17 August. On 18 August, 8 x 37-mm
25X1	AA guns, 2 one-axle canvas-covered special sets and 12 three-axle trucks were
	observed near the old AA gun emplacement at the western end of the southern
	trucks were parked behind. The guns were not emplaced up to 23 August. At
	9 a.m., on 29 August, six 37-mm AA guns and several trucks were loaded on flat-
	cars, and soldiers wearing red-bordered black epaule is were loaded on flat- at Brand rathroad station. The train deposits appeared by the control of the co
	at Brand railroad station. The train departed toward Cottbus at h n.m. (h)

- 9. From 400 to 500 crates with bombs were stored in the open in the ammunition dump.
- 10. A double pipeline of galvanized tubes about 110 mm in diameter extended from the fuel dump to the dispersal area. The tubes with bayonet joints were carried on sheet metal supports. A Diesel pump was erected at the dispersal area. Source did not observe that refueling was conducted there. (5)
- On 19 August, all the roads at the field were being cleaned and all the trees along the roads and the edge stones were being painted white. Many soldiers wore clean uniforms. General Chuikov who was expected to arrive at the field did not come. On 26 August, high-ranking Soviet officers arrived at the field including 1 general, probably General Chuikov, 1 air force general, 2 air force brigadier generals, 6 air force colonels, including Colonel Zoldatov (fnu) and Colonel Terechenko (fnu), Lieutenant Colonel Smyrnow (fnu) of the Werder Air Force Construction Staff, about 20 majors from the air force and army and I MVD major. Before the officers arrived, a type-27 plane 25X1 was pushed into the newly built shrapnel-proof aircraft revetment. A low twin-wheel set with a carbonic acid flask and two-sectional steel chock blocks, each about 50 cm high were brought to the aircraft revetment. Before the demonstration started, all the German engineers and workers were ordered by military polke to retire to an area far from the site. The engine of the plane was started and run up so that the plane rose over the chock blecks and appeared outside the shrapnel-proof revetment. A large plume of dust developed because the area around the hardstand was not yet concreted. After the demonstration, the generals drove about the field for about 15 minutes and then left the field about 2 p.m. Subsequently, a conference was held which also attended by the German engineers. Some changes were ordered for the other shrapnel-proof sircraft revetments which were under construction. A final construction plan for such revetments, also intended to be built at other airfields, is to be issued in Terder on 2 September 1952.
 - 12. On 27 August, bombs were detonated in the vicinity of the shraphel-proof aircraft revetment in order to test its resistence. A 100-kg bomb was exploded at a distance of 5 meters from the highest wall and a 250-kg bomb at a distance of 12 meters. The revetment showed light damage including some cracks on the ground although the installation had been built of regular cement only 5 to 12 days before. (6)

ە ئا	Major Mironenko (fnu) will go on leave to the U.S.S.R.
25X1	between late September and 10 November. During that period, his deputy will be
_0/(:	Major Chefshenke (fru) who will also are ling that period, his deputy will be
	Major Chefshenke (inu) who will also supervise the construction projects at
	Brand and Melzow airfields. After returning from leave, Mironenko is to turn ever his command at Brand airfield.
	and all the control of the control o

	1	
	•	Zoldatov probably is the commanding officer of the air unit at Brand
		airfield. Mankin probably is the officer of the OATE in Frand.
25X1	(2)	there was intensive air activity at
		Brand airlield during the day and night. In regard to the approach
		flights at Brand airfield in bad weather, it is believed that the planes made practice approach flights. after crossing the outer landing
		beacon in Krausnick, the pilot deviates to the right until the plane is in line with the Adcock DF station. Then he heads for the Adcock DF
		station and, when crossing it, he flies a right turn at an angle of
		90 degrees and, subsequently, lands on the runway. It is believed that this procedure is practiced in order to train the pilot in instru-
		ment flying. However, the procedure will hardly be used for actual
		blind flying because there are simpler methods of landing in bad weather. For location of landing beacon and Adoock DF station on the
		basis of previous reports, and for course of approach flight, me
	(3)	Annex 1. The strength of a searchlight platoon is reported for the first time.
		The plateon is believed to belong to the OATD.
